

Complete Energy Transformation for Gas Stations

Reduce energy costs, protect your installations, and transform your service station into a clean energy hub with EV charging, solar, and storage.

THE CHALLENGE

Gas stations face a perfect storm of rising energy costs, grid instability, and the need to adapt to the electric future.

- **High energy costs at service stations with shops and car washes, compounded by continuous 24/7 consumption.**
- **Hours of grid instability per year affecting critical equipment like pumps and POS systems.**
- **Each power outage causes significant losses: lost sales, perishable goods, and equipment damage.**

ENERAQ INTEGRATED SOLUTION

Each component works independently, but together they multiply savings.

CASE STUDY: BILBAO GAS STATION

Medium-sized service station with convenience store, car wash, and 4 EV charging points.

AVAILABLE SUBSIDIES

Active programs applicable to service stations.
